Raja Sahil Changaiz · trade checklist

Your main mentor. Strong and arrival zones, the curve, two-zone direction change, location and realignment.

RamanFX · Oct 24, 2026
90 points · cradle to grave

0 Mindset & risk rules

- ☐ Follow pips, not money: trade zone to zone. L7
- ☐ Risk 1-2% at most per trade; start at 0.01 lots. L7
- ☐ Step lots up only from a profit cushion; losses come out of profit. L7 · Feb 25
- ☐ Trade with the trend; supply and demand works in the market's direction. L101
- ☐ No zone, no trade, even if you wait a month for price. L55
- ☐ After a loss, stop for the day. No revenge trades. L7
- ☐ No indicators: zones and trendlines only. L51 · L101

1 Top-down: direction

- ☐ Take direction from monthly, weekly or daily only, never from H1. L7
- ☐ Monthly: find the target, the opposite strong zone, and count the pips. L9
- ☐ Between the two HTF strong zones draw the curve: 25/50/75%, proximal to proximal. L4
- ☐ Top 25% = high curve, sellers only. Bottom 25% = low curve, buyers only. L4
- ☐ Trendline through the two latest valleys (up) or peaks (down); do not redraw it. L4 · Feb 10
- ☐ A cross counts only on a full candle close beyond the line. L4 · L54
- ☐ Direction changed = trendline crossed + two opposite zones removed. L3
- ☐ One opposite zone removed is still the same trend, maybe a pullback. L3
- ☐ After a change, target the HTF zone where the move started. L3
- ☐ Monthly + weekly agree = sequence: trade fresh daily zones that way. L8
- ☐ Monthly and weekly disagree: wait for the retracement and a confirmation. L9
- ☐ Find the wow area: open pips from the removed zone to the next one. L50 · L101

2 Find & draw zones

- ☐ Zone = base of 1-6 small candles + a big departure. L55
- ☐ Departure must travel at least twice the base and have closed. L55
- ☐ Demand: bottom wick to thick body. Supply: top wick to body. L55
- ☐ Proximal line = entry. Distal line = stop side. L55
- ☐ Over 6 base candles, a lone doji or long lengthy candles: not a zone. L55 · L54
- ☐ Valley or peak (V, inverted V) = reversal zone; prefer these. L55
- ☐ CP = drop-base-drop / rally-base-rally: a pause on the way. L55
- ☐ PCP = a CP or departure that removed the opposite zone. L1 · L55
- ☐ After a gap, use the zone before the gap, not the gap. L55
- ☐ Stacked zones: the one nearest the trendline is the real zone. L102 · L104

3 Qualify the zone

- ☐ Strong = its leg-out closed beyond the opposite zone. L1 · L51
- ☐ Arrival = crossed the trendline AND removed the opposite zone. L1 · L51
- ☐ Fresh? Only the first touch gets set and forget. L2 · L52
- ☐ 2nd and 3rd touch = confirmation only; expect the 4th to break. L52 · Mar 5
- ☐ Removed nothing = weak: confirmation only. L52
- ☐ Inheritance: crossed the trendline but removed nothing. Weak, a maker's trap. L52 · L101
- ☐ Overlap: built inside an old opposite zone, no gap. Weak. L52 · L101
- ☐ Flip area (old resistance becomes support): confirmation only. L2 · L52
- ☐ Out of trendline: old-trend zone after the cross. Weak. L52 · L101
- ☐ Price poked in and meshed there = tested, not fresh. L2 · Feb 18
- ☐ Demand below 50%, best in the low curve; supply the mirror. L4
- ☐ Room to the opposite zone: 3x the stop, 2x minimum, 1x skip. L7 · L53
- ☐ Best demand sits just above the trendline; 25-30 pips away often breaks. L107

4 Plan: entry, stop, target, size

- ☐ Drill to the location: smallest fresh zone nested inside the HTF zone. L6
- ☐ Entry: limit at the proximal line. L55
- ☐ Stop: beyond the distal by a % of zone height, minimum 3 pips. Your rule · ZV 2.10
- ☐ Buffer: LTF 25%, H1 20%, H4 15%, D1 10%, W1 and above 5%. Your rule · ZV 2.10
- ☐ (Raja's lessons: D1 at the distal, H4 3-4 pips, 10-15 with small brokers.) L1 · Mar 5 · Mar 27
- ☐ Target: 7 pips before the opposite zone's proximal (Raja says 5-10). Your rule · L7
- ☐ Size from the stop: 1-2% risk, small lots. L7
- ☐ Split into two positions at one price; never more than two. L7
- ☐ LTF entry, HTF target: H1 entry aims at the daily zone. L106

5 Entry: set & forget or confirmation

- ☐ Set and forget only on fresh strong or arrival zones, first touch. L1 · L101
- ☐ Blind entry only at: wow trade, fresh arrival, untapped near-trendline zone. L104 · Mar 27
- ☐ Weak or tested: confirm one timeframe lower (D1 to H1, H1 to M15). L52 · L101
- ☐ Confirmation A: LTF crosses trendline + removes last opposite zone; trade that zone. L2 · L52
- ☐ Confirmation B: price closes back across the proximal; enter at market. L2 · L105
- ☐ No confirmation = no trade. Move to an easier pair. L52
- ☐ Price sitting in an opposite zone? Wait until it is removed. L50
- ☐ H4 and below: trade impulses only, never corrections. L5 · L102
- ☐ After a sharp move into an HTF zone, wait and trade the wick fill. L105 · L107

6 Manage the trade

- [ ] Close one at the near target or the H1 trendline cross; hold the other. L7 · L103
- [ ] Held stop stays at the zone, not breakeven; breakeven gets hunted. L7 · L103
- [ ] Trail the stop to each new fresh zone or CP behind price. L4 · L103
- [ ] Swing: stop at the second-latest zone; keep one zone as buffer. L53
- [ ] First opposite zone breaks: move the stop behind the second. L3
- [ ] Second opposite zone breaks: close. Price is going back. L3 · L4
- [ ] Correction trade: tighten or close once price crosses the 50% line. L103

7 Exit & review

- [ ] Exit before the opposite zone; re-enter if price returns. L7 · L106
- [ ] Hold part 2 of a wow trade only after the part-1 zone is removed. L50
- [ ] Log the 7 steps: timeframe, margin, condition, market, entry, stop, target. L53
- [ ] Log zone type, touch number and which confirmation you used. L52 · L105
- [ ] Loss? Check for overlap, inheritance or a 4th touch first. L52 · L101
- [ ] Screenshot before and after; get trades reviewed before going live. L53 · L103

! Never

- [ ] Never set and forget a tested, overlap, flip, inheritance or out-of-trendline zone. L52
- [ ] Never buy in the high curve or sell in the low curve. L4
- [ ] Never sell while price sits in a demand, or buy in a supply. L50
- [ ] Never trade a sideways or meshing market. L8 · L101
- [ ] Never trade without a known wow target. L101
- [ ] Never trade with room smaller than 2x the stop. L7 · L53
- [ ] Never count a wick through a line or zone as a break. L4 · L50
- [ ] Never trade the 4th touch of a zone or trendline. L102 · L103
- [ ] Never trade XAUUSD on the low timeframes; use XAUAUD. L53 · L107

See it on any chart

- [ ] Small candles, then big ones leaving fast: a zone was born. L55
- [ ] Leg-out closed past the opposite box: strong. L1
- [ ] Leg-out crossed the line and killed the box: arrival. L1
- [ ] Clean empty space to the next box: wow pips. L50
- [ ] A box sitting inside an old opposite box: overlap, skip. L52
- [ ] A long wick: price will come back to fill it. L101
- [ ] A line tapped three times: expect the 4th to break. L103
- [ ] Price chopping between a supply and a demand: mesh, sit out. L101

Notes

Stop: Raja's lessons vary (distal on D1, 3-4 pips on H4 in L1; 10-15 pips in Mar 5/Mar 27). You chose a % of zone height beyond the distal (ZoneVision 2.10).

Target: L55 puts the TP at the opposite proximal; L7/L106 say 5-10 pips before it. You use 7 pips before.

Touches: monthly zones hold 2-3 confirmations (L2); a tapped arrival zone broke on the 3rd visit (L101); H1 zones often break on the 2nd. The sheet uses 2nd/3rd = confirmation, 4th = break.

Breaks: L101 once allowed a 5-10 pip wick; L50, L54 and L106 all require a candle close. The close rule is used.

Curve: L4 says buy only in the low curve; Feb 10 lets buyers go up to the 50% line. The sheet says below 50%, best in the low curve.

Kevin · trade checklist

Same approach as Raja in plain English: MTA, multiple sequence, set & forget vs confirmation, the curve.

RamanFX · Oct 24, 2026
68 points · cradle to grave

0 Mindset & risk rules

- ☐ Risk 1% per trade, always, with a hard stop. L18 *(≠ Raja allows 1-2%)*
- ☐ Probabilities, not predictions: never trade a prediction against the trend. L11
- ☐ Stick to one side: long, short or flat. Flat is a position. L11
- ☐ Know your win rate, R:R and max drawdown before trading. L16 · S&D PDF
- ☐ Judge a system over six months, not three losses. L11 · L16
- ☐ Never move your stop wider. S&D PDF

1 Top-down: direction

- ☐ Pick one entry timeframe and its HTF: H1-D, H4-W, D-M (15m-H4). L4 · S&D PDF
- ☐ Check the HTF trend first; do not start on the entry chart. L12 · L13
- ☐ Trend = higher highs + a blatantly obvious trendline. S&F PDF
- ☐ Draw a trendline only after the prior swing high/low is broken. L5 · L14
- ☐ Momentum lines (steep, tiny pullbacks) are not trendlines; never draw them. L5 *(≠ Raja draws steep lines along impulses)*
- ☐ Trendline removed by the first candle closing fully, body and wick, beyond. L18 · L22
- ☐ Draw the curve between HTF demand and supply, split at 50%. S&F PDF *(≠ Raja uses 25% bands)*
- ☐ MSA: ask why the HTF zone should hold; check the next timeframe up. L7
- ☐ HTF sideways = low odds; wait for price to leave the range. L20

2 Find & draw zones

- ☐ Zone = basing + strong move away + stay away + space. L18
- ☐ No strong move away = no zone. S&D PDF
- ☐ Tight basing, 1-4 candles; 1-2 candles is best. S&D PDF *(≠ Raja allows 1-6)*
- ☐ Distal on the extreme wick of the basing, wick always included. L3 · L16
- ☐ Proximal on a basing candle body or wick, tight to the move. L3 · S&D PDF
- ☐ Keep zones a similar size on one timeframe; never shrink to fit. L3 · L18
- ☐ VP = DBR / RBD (reversal); CP = RBR / DBD (continuation). S&D PDF
- ☐ Draw zones before the fact, never because price reacted there. L16

3 Qualify the zone

- ☐ Must break an opposing zone OR remove a trendline (either is enough). S&D PDF · L2 *(≠ Raja: trendline alone = inheritance, weak)*
- ☐ Inside a matching HTF zone, a clean zone may qualify without removing. L2 *(≠ Raja: removed nothing = weak)*
- ☐ Zones must be fresh: price has not returned yet. S&D PDF
- ☐ Tested over 75% deep = out. L13
- ☐ Trade only the nearest ETF zone until it is removed. L8
- ☐ Inside HTF demand only buys; inside HTF supply only sells. L4
- ☐ Three CPs in a row = overextended: stop or cut risk. L8 · L13
- ☐ Be wary of zones sitting on a trendline or old S/R. L16 *(≠ Raja prefers the zone nearest the trendline)*
- ☐ Low odds: counter-trend, near the opposing HTF zone, or old zone. S&F PDF

4 Plan: entry, stop, target, size

- ☐ Limit order just before the proximal, spread added. L6 · S&D PDF
- ☐ Stop just beyond the distal with a little room. L6 *(≠ You and Raja: % of zone height beyond the distal)*
- ☐ Profit margin = room to the next opposing HTF zone. S&F PDF
- ☐ High odds: 1:3+ or the opposing zone, TP always in the market. S&F PDF
- ☐ No MSA zone? Risk 0.25-0.5% instead of 1%. L7
- ☐ Low odds: 0.5% risk, 1:1 target, alert at 1:1. S&F PDF

5 Entry: set & forget or confirmation

- ☐ Set & forget: HTF trend and ETF trend agree, fresh zone. S&D PDF · S&F PDF *(≠ Raja: S&F only on strong/arrival zones)*
- ☐ Embedded LTF zone formed with the HTF zone = set & forget. L23
- ☐ Confirmation: wait until price actually touches the HTF zone. Conf PDF
- ☐ Then on the ETF: opposing zone and/or trendline removed. L15 · Conf PDF
- ☐ Best signal: trendline and zone removed. Enter on the pullback. Conf PDF
- ☐ Confirm counter-trend, near-trendline, oversized or doubtful zones. L15
- ☐ No trade into news; wait for spreads to settle. L12

6 Manage the trade

- ☐ His plan: 25% off at 3:1, hold 75% to the HTF zone. L6 *(≠ Raja splits into two equal positions)*
- ☐ His plan: move the stop to breakeven around 2:1. L17 *(≠ Raja: never breakeven, stop stays at the zone)*
- ☐ Bump the stop under new lower-timeframe zones as price moves. L6 · S&D PDF
- ☐ Remove the order if price hits the opposing HTF zone first. L10
- ☐ Set & forget: keep only the order at the nearest zone. L10
- ☐ Zone clearly broken: take the loss and move on. L16

7 Exit & review

- ☐ Hold toward the opposing HTF zone when inside a HTF zone. L4
- ☐ Close sooner if an opposing zone sits close to the target. L6
- ☐ Screenshot every timeframe; track doubtful zones to decide later. L15 · L18
- ☐ Losing streak? Re-read your pre-written notes before changing anything. L17

! Never

- ☐ Never buy inside HTF supply or sell inside HTF demand. L4 · L12
- ☐ Never chase price; wait for the pullback. L1
- ☐ Never trade a zone inside a big messy range. L20
- ☐ Never call a zone removed by an emotional wick. L18 · L21
- ☐ Never force a trade; no opportunity is a valid decision. L18
- ☐ Never trade without a hard stop. L18
- ☐ Never change the strategy after two or three losses. L11 · L17

See it on any chart

- [ ] A pause, then a big fast move away: the footprint. L1
- [ ] Marubozu leaving the base: an odds booster. S&D PDF
- [ ] A gap away from the base: extreme imbalance. S&D PDF
- [ ] A stay-away candle with space before the proximal. L18
- [ ] Steep line with tiny pullbacks: momentum, not a trend. L5
- [ ] Obvious S/R just before your zone: a liquidity trap that fuels it. S&D PDF

Notes

Where Kevin differs from Raja the bullet carries a ≠ note. You trade Raja first: when they clash, follow Raja.

Sam Seiden · trade checklist

The origin of the method: odds enhancers, profit margin, first return, and who is on the other side.

RamanFX · Oct 24, 2026
40 points · cradle to grave

0 Mindset & risk rules

- [ ] Price is the primary input; indicators are secondary at most. L17 · L278
- [ ] Write a plan with no discretion left in it. L42
- [ ] Risk a fixed 1%; size from the stop distance. L144
- [ ] Never change the rules because of a loss. L102

1 Top-down: direction

- [ ] Never trade from one timeframe: larger for direction, smaller for entry. L97 · L299
- [ ] Swing: weekly or daily direction, 60-minute entries, no smaller. L260
- [ ] Uptrend: buy demand only. Downtrend: sell supply only. L410
- [ ] Check the HTF curve: buy low on it, sell high on it. L9 · L102

2 Find & draw zones

- [ ] Find a strong momentum move, then draw its origin. L154 · L271
- [ ] Prefer pivots (RBD, DBR) over middle-of-move bases. L178 · L93
- [ ] Two lines around the base; the majority of trading inside. L78 · L81

3 Qualify: odds enhancers

- [ ] Score strength of the move away: gap > big candles > gradual. L1 · L335
- [ ] Score time at level: fewer candles = stronger. L331 · L391
- [ ] Score freshness: 1st return 2, 2nd 1, 3rd 0. L1
- [ ] Score profit margin: at least 3:1 to the opposing level. L1 · L163
- [ ] Score big picture: near HTF demand, low on the curve, with trend. L1 · L102
- [ ] 9-10 = limit order; 8 = confirmation; under 7 = no trade. L1
- [ ] Stacked levels (another just beyond) are stronger. L321

4 Plan: entry, stop, target, size

- [ ] Entry at the proximal line, before price arrives. L110 · L193
- [ ] Stop just beyond the distal, where the opposing orders sit. L144
- [ ] Target 1 at 3:1, target 2 near 5:1 or the opposing level. L190 · L248
- [ ] Place entry, stop and targets together as an OCO bracket. L125

5 Entry

- [ ] Ask: who is on the other side of my trade? L93 · L95
- [ ] Sell to novices buying after a rally into supply. L49 · L54
- [ ] Bad news pushing price into fresh demand = a buy. L150 · L167
- [ ] Stand aside into major announcements like FOMC. L410

6 Manage & exit

- [ ] At 3:1 move the stop to breakeven. L223
- [ ] Trail on a smaller timeframe beyond each new zone. L144
- [ ] Exit just before the opposing level, not at it. L328
- [ ] Review average win, average loss and win rate regularly. L42

! Never

- [ ] Never buy after a rally or at supply. L356
- [ ] Never chase a missed fill. L56
- [ ] Never trade at equilibrium, in the middle of a range. L46 · L89
- [ ] Never trade a level penetrated 25% or more. L418
- [ ] Never short near HTF demand. L163

See it on any chart

- [ ] Price could not stay there: a pivot, a real level. L87 · L95
- [ ] Empty space with no basing to the next level: profit margin. L414
- [ ] Each return reacts less: the level is failing. L217
- [ ] Gap into a level after a rally: novices arriving. L104 · L108
- [ ] Shrinking distance between pivots: the trend is ending. L295

Notes

Base size: L5 calls 3-6 candles ideal; later articles (L331, L335, L391) say fewer candles is stronger. The sheet uses fewer.

Touches: most articles trade only the first (at most second) return; L418 keeps trading a level whose returns leave strongly.

Trend filter: L193 and L201 use a moving average only to locate levels; L394 drops MAs. Price trend is used here.

Kevin Baker · trade checklist

No indicators: grade zones on speed, freshness and time, stops beyond the zone, 3:1 to the first exit.

RamanFX · Oct 24, 2026
37 points · cradle to grave

0 Mindset & risk rules

- ☐ Read supply and demand from price, not indicators. L1
- ☐ Risk 1% or less; size from the risk, never the reverse. L10
- ☐ Write the plan: symbols, timeframe, setups, minimum ratio, hours. L12
- ☐ No more than two or three positions at once. L8 · L14

1 Timeframe & direction

- ☐ Investing: weekly. Swing: daily. Day: daily zones, hourly or 5m entries. L6 · L7 · L8
- ☐ Swing high = supply won; swing low = demand won; tight range = balance. L3

2 Find & draw zones

- ☐ Pivot zone: the full high-to-low of the turning candle. L4
- ☐ Range zone: a tight range price left dramatically. L4
- ☐ Indecision zone: a doji halfway through a strong trend. L4
- ☐ Gap zone: draw the gap as one big candle. L4
- ☐ Too wide? Refine on the hourly; never move the distal. L4

3 Grade the zone

- ☐ Fast out, ideally fast in. L5
- ☐ Fresh: look left (up to five years) for an older retest. L5
- ☐ Little time inside: reversal few candles, range 3-6. L5
- ☐ More touches = weaker, unlike support and resistance. L5
- ☐ Opposing zone directly in the path? Wait for the break or skip. L5

4 Plan: stop, exits, size

- ☐ Stop a few cents beyond the zone, set before entry. L11
- ☐ Three exits, one cent before each obstacle. L10 · L11
- ☐ At least 3:1 to the first exit, or skip. L10 · L14
- ☐ Shares = account risk ÷ risk per share, costs included. L11
- ☐ Enter the stop order together with the entry. L10

5 Entry

- ☐ With trend: rejection candle with its wick in the zone; enter after the close. L7
- ☐ Against trend: strong zones only, limit near the far edge. L7 *(≠ Raja confirms counter-trend zones)*
- ☐ A broken zone flips sides; trade its pullback. L7 · L9 *(≠ Raja: flip areas are weak)*
- ☐ Gap through a zone: wait for the opening pullback. L9
- ☐ All-time high or low: wait for a strong new zone. L9

6 Manage & review

- ☐ Trail beyond each new higher low (long) on the execution chart. L8
- ☐ Cut losers at the stop; no hoping. L10
- ☐ Review every trade against the plan. L12 · L14

! Never

- ☐ Never buy with supply directly overhead. L5
- ☐ Never use ATR or volatility stops; the zone sets the stop. L11
- ☐ Never widen the stop to make a trade fit. L5
- ☐ Never fade a strong trend at a weak zone. L7

See it on any chart

- ☐ One-candle turn = faster in and out = bigger imbalance. L2
- ☐ Merge any reversal pattern into one hammer or shooting star. L2
- ☐ A fast falling-knife drop into strong demand: the best trade. L8
- ☐ Tight sideways candles: balance, nothing to trade inside. L3

Notes

Baker trades a broken zone from the other side and fades trends without confirmation at strong zones; Raja calls flip areas weak and confirms. Follow Raja when they clash.
